

AI FITTRACK API

Brainstorming & Idea Prioritization

Selecting practical AI-enabled fitness features

TEAM ID	SWTID-2026-7021
TEAM	Baranivel K (Leader); Ramesh M; Srikanth M; Nandhakumar S; Chandru S
DATE	30 September 2026

Opportunity

Provide a backend where users securely record workouts, retrieve activity, search entries, and request AI-generated guidance.

Ideas

- Registration, login, and protected profile.
- Workout CRUD and history search.
- Gemini recommendation from age, fitness goal, and experience.
- Gemini insight from workout totals and averages.

Priorities

Authentication and user-owned records first; CRUD and search next; AI features on the authenticated foundation. MongoDB, environment configuration, error handling, and Postman support the solution.

Scope

This submission is a REST backend. No client interface, wearable integration, billing, or clinical diagnosis is present.
