Problem

A fitness user needs a secure service to preserve workout activity and retrieve practical guidance from fitness profile and progress.

Statements

- As a user, I need to register and sign in so my data is linked to my account.
- As a signed-in user, I need to manage and search workouts.
- As a signed-in user, I need a recommendation based on age, goal, and experience.
- As a signed-in user, I need an insight based on workout totals.

Scope boundary

The API supports account, workout, search, and AI routes. No user study, client app, or deployment evidence was in the uploaded ZIP.

Success evidence

Source code and a Postman collection define behavior; successful live testing must be documented separately.
