

AI FITTRACK API

Solution Architecture

Layers and request sequence

TEAM ID	SWTID-2026-7021
TEAM	Baranivel K (Leader); Ramesh M; Srikanth M; Nandhakumar S; Chandru S
DATE	30 September 2026

Layers

Client/Postman -> Express -> routes/auth middleware -> controllers -> Mongoose/MongoDB. AI controllers call Gemini service.

Protected request

Bearer token -> JWT verification and user lookup -> controller -> ownership-scoped query -> JSON response; errors go to common handler.

Startup

src/server.js loads config, connects MongoDB, creates app, and listens on configured port. README documents npm run dev and npm start.

Operational limits

External AI availability matters. Production timeout, retry, rate-limit, monitoring, backup, and secret policies are not demonstrated.
