

AI FITTRACK API

Code-Layout, Readability and Reusability

Code structure and maintainability

TEAM ID	SWTID-2026-7021
TEAM	Baranivel K (Leader); Ramesh M; Srikanth M; Nandhakumar S; Chandru S
DATE	30 September 2026

Layout

src/config/db.js; src/controllers/{authController,workoutController,aiController}.js; src/middleware/{auth,errorHandler}.js; src/models/{User,Workout}.js; src/routes/{index,authRoutes,workoutRoutes,aiRoutes}.js; src/services/geminiService.js; src/app.js; src/server.js.

Separation

Routes map paths; controllers validate and coordinate; models define persistence; auth middleware protects; AI service isolates provider calls.

Observed practices

Descriptive files, grouped routes, async handlers, comments, and common error formatting aid readability.

Review opportunities

Add request schema validation, allowlisted update fields, consistent malformed-ID handling, explicit AI model configuration, and public-deployment rate limiting. No audit report supplied.
