| DATE    | 30 September 2026                                                    |

---

### Targets

Measure health check, auth/profile, workout reads/writes/search, and AI routes; report external AI timings separately.

### Method

Use controlled environment and synthetic data. Record concurrency, sample count, median/percentile latency, throughput, errors, dataset size, provider/model, and environment.

### Safety

Do not use real health data or expose secrets; avoid excessive load on third-party services.

### Evidence

Postman defines requests but no benchmark, load script, or measured results were supplied. No performance numbers are claimed.

### Follow-up

Choose host-specific targets and record actual conditions and measurements.
