

AI FITTRACK API

Scalability & Future Plan

Growth and reliability opportunities

TEAM ID	SWTID-2026-7021
TEAM	Baranivel K (Leader); Ramesh M; Srikanth M; Nandhakumar S; Chandru S
DATE	30 September 2026

Foundation

Modular application and account-scoped MongoDB records provide a structured basis for extension.

Near-term

- Automated tests for auth, ownership, validation, and errors.
- Request validation and safe update allowlist.
- Pagination/indexes as data grows.
- Gemini timeout/retry/quota/rate limiting.
- Structured logs, readiness, monitoring.

Scale options

Managed database/backups, stateless API instances, secret store, latency/error monitoring, queue for long AI tasks if needed.

Privacy

Minimize data sent to providers, disclose data flow, avoid medical claims, and direct health questions to qualified professionals.

Boundary

Recommendations only; deployment, backups, monitoring, and scaling are not present in code.
